

## Cheyenne Crape Myrtle

*Lagerstroemia 'Cheyenne'*

Height: 25 feet

Spread: 20 feet

Sunlight: ☉ ●

Hardiness Zone: 6b

Other Names: Crape Myrtle, Crepe Myrtle

### Description:

This attractive ornamental shrub or small tree is covered in crimson red blooms in summer, followed by deep red fall foliage; a captivating focal point for the garden or border

### Ornamental Features

Cheyenne Crape Myrtle is clothed in stunning panicles of crimson frilly flowers at the ends of the branches from early to late summer. It has attractive burgundy-variegated dark green foliage which emerges burgundy in spring. The oval leaves are highly ornamental and turn dark red in fall.

### Landscape Attributes

Cheyenne Crape Myrtle is a dense multi-stemmed deciduous tree with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Cheyenne Crape Myrtle is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

## Planting & Growing

Cheyenne Crape Myrtle will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 50 years or more.

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
