

Molonglo Juniper Leaf Grevillea

Grevillea juniperina 'Molonglo'

Height: 24 inches

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 8a

Description:

A hardy and adaptable species that will assume a low shrubby form; produces spidery apricot-peach flowers; grows well in most well drained soils; it will also tolerate moderate to heavy frost; foliage may be sharp at the ends

Ornamental Features

Molonglo Juniper Leaf Grevillea features delicate peach spider-like flowers along the branches from late winter to early summer. It has attractive dark green evergreen foliage which emerges chartreuse in spring. The spiny needles are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Molonglo Juniper Leaf Grevillea is an open multi-stemmed evergreen shrub with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Molonglo Juniper Leaf Grevillea is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use

Planting & Growing

Molonglo Juniper Leaf Grevillea will grow to be about 24 inches tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
