Height: 3 feet

Spread: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 9a

Other Names: Bora Jade

Description:

A small, heavy bodied shrub with attractive, oval, leaves that are edged in burgundy with reddish spots; very drought-tolerant and does well in poor soils; flowers infrequently; an excellent choice for containers and rock gardens

Ornamental Features

Bora Silver Dollar Plant has attractive grayish green foliage edged in burgundy with hints of silvery blue which emerges light green in spring on a plant with an upright spreading habit of growth. The succulent oval leaves are highly ornamental and remain grayish green throughout the winter. It is bathed in stunning corymbs of white star-shaped flowers with pink overtones at the ends of the branches from early spring to early summer. The flowers are excellent for cutting. The coppery-bronze stems can be quite attractive.

Landscape Attributes

Bora Silver Dollar Plant is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and can be pruned at anytime. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Bora Silver Dollar Plant is recommended for the following landscape applications;

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Bora Silver Dollar Plant will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It has a low canopy. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. Like most succulents and cacti, this plant prefers to grow in poor soils and should therefore never be fertilized. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Bora Silver Dollar Plant makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
