Carnicolor Stonecrop

Sedum adolphii 'Carnicolor'

Height: 8 inches

Spread: 20 inches

Spacing: 14 inches

Sunlight: ○ ◐

Hardiness Zone: 9a

Description:

This outstanding variety has bright, bluish-green foliage that is edged and tipped with rose-pink in bright light or cool temperatures; has a trailing, spreading, low habit that is great for indoor dish gardens or planters in bright areas

Features & Attributes

Carnicolor Stonecrop features showy clusters of yellow star-shaped flowers with gold eyes at the ends of the stems from early to mid summer. Its attractive succulent oval leaves emerge chartreuse, turning light green in color with prominent shell pink tips and tinges of silvery blue throughout the year.

This is a dense herbaceous evergreen houseplant with a trailing habit of growth, eventually spilling over the edges of hanging baskets and containers. Its relatively fine texture sets it apart from other indoor plants with less refined foliage. This plant may benefit from an occasional pruning to look its best.

When grown indoors, Carnicolor Stonecrop can be expected to grow to be about 8 inches tall at maturity, with a spread of 20 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. This houseplant will do well in a location that gets either direct or indirect sunlight, although it will usually require a more brightly-lit environment than what artificial indoor lighting alone can provide. It prefers dry to average moisture levels with very well-drained soil, and may die if left in standing water for any length of time. This plant should be watered when the surface of the soil gets dry, and will need watering approximately once each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. Like most succulents and cacti, it prefers to grow in poor soils and should therefore never be fertilized. It is not particular as to soil pH, but grows best in poor soil. Contact the store for specific recommendations on pre-mixed potting soil for this plant.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.
