Confetti Bush

Coleonema pulchellum

Height: 3 feet

Spread: 24 inches

Sunlight: ○

Hardiness Zone: 8b

Other Names: Pink Diosma, Pink Breath

Description:

A regal display of small dainty flowers covers this shrub from mid-spring to early-fall adding great interest to sunny borders; once established it is quite drought tolerant, wind resistant, and can withstand mild frost

Ornamental Features

Confetti Bush features dainty clusters of lightly-scented white star-shaped flowers with pink streaks at the ends of the branches from mid spring to early fall. It has green evergreen foliage. The needles remain green throughout the winter.

Landscape Attributes

Confetti Bush is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Confetti Bush is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Confetti Bush will grow to be about 3 feet tall at maturity, with a spread of 24 inches. It has a low canopy with a typical clearance of 1 foot from the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This species is not originally from North America.

Confetti Bush makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
